# HOW TO PLANT BULBS

## IT'S EASY TO GROW BULBS THIS WAY!

The simple planting chart above shows average planting depths and spacing for hardy bulbs. In cases when you have a light, friable soil, Tulip bulbs may be planted deeper, so that they will give more years of bloom before they need be divided.

Exceptions to the depths shown in the chart should be made in the case of *Lilium auratum* and *L. candidum*, which, unlike other Lilies, should be planted only 2 to 3 inches deep.

After blooming, bulbs should be left undisturbed until the foliage has turned yellow. It is not necessary to dig bulbs up after blooming.

A good application of coarse bonemeal is beneficial when applied to soil before planting in the fall. Sacco Plant Food (4-12-4), when applied in the spring after bulbs have grown 2 to 3 inches, will encourage a stronger stem and larger, brighter flower.

# BOTONONE

Mysterious loss of bulbs? It is most likely due to an underground attack of insects and harmful bacteria. For comprehensive protection of the entire plant, including roots as well as foliage, Bottonone has proved most effective. Soak bulbs in double strength Bottonone solution (one ounce to the gallon) for an hour before planting. Pt. \$2.00; gal. \$12.00.

## BONEMEAL, Raw

Use when preparing soil for bulbs. 100 lbs. \$8.00.

## SACCO PLANT FOOD (4-12-4)

The finest of fertilizers, a combined soil rectifier and growth producer for use on lawns, shrubs, flowers, trees, potted plants and vegetables. Buy it; try it. 25-lb. bag \$1.50; 50-lb. bag \$2.75; 100-lb. bag \$4.25.

## TERRA-LITE (Vermiculite)

Ideal as a mulch for all sorts of bulbs and plants during the winter as well as summer. The pore structure of Terra-Lite prevents this medium from becoming saturated; it never mats down or becomes soggy. It withstands wide variations in winter temperature. Many authorities hail Terra-Lite as a most efficient mulch. 4-qt. size 45c; 1/2-bu. size \$1.00; 2-bu. size \$2.50.

## Botanical or Species Tulips and Their Hybrids

The following collection of Botanical Tulips includes a great number of beautiful and interesting varieties, which show a bewildering variation of size and shape of flowers, structure of leaves, habits, etc. The only thing they have in common is the fact that they grow wild in some part of the world—Asia Minor, Central Asia, Greece, the Mediterranean. Cultivation has not modified them and they may be planted in the rock garden between creeping plants or in colonies in small, warm nooks, a situation where the larger-flowered garden Tulips would be out of place. Blooming period April 1 to late May.

# Daffodils and Narcissus

The beauty of Daffodils and Narcissi is unquestioned, and these flowers now form a leading feature in almost every spring garden. Every gardener should realize the enormous amount of pleasure that can so easily be obtained from growing them.

**Revision of the Classification of Daffodils.** In this catalog we have adopted the revised system for the new R.H.S. classification of Daffodils and Narcissi formally approved by the General Bulb Growers Society of Haarlem (Holland) and the Daffodil Societies of America, Canada, Australia, Tasmania and New Zealand.

The whole Genus is now classified in eleven Divisions as follows:

- Ia. Yellow Trumpets.
- Ib. Bicolor Trumpets.
- Ic. White Trumpets.
- IIa. Large-Cupped, yellow perianth, colored cup or corona.
- IIb. Large-Cupped, white perianth, colored cup or corona.
- IIc. Large-Cupped, white perianth, white cup or corona.
- IId. Large-Cupped, not falling in a, b, or c.
- IIla. Small-Cupped, yellow perianth, colored cup or corona.
- IIlb. Small-Cupped, white perianth, colored cup or corona.
- IIlc. Small-Cupped, white perianth, white cup or corona.
- IIId. Small-Cupped, not falling in a, b, or c.
- IV. Double Varieties.
- V. Triandrus Narcissi.
- VI. Cyclamineus Narcissi.
- VII. Jonquilla Narcissi.
- VIII. Tazetta Hybrids (Poetaz, etc.).
- IX. Poeticus Narcissi.
- X. Species and Wild Forms and Hybrids.
- XI. Miscellaneous Narcissi not falling into any of the foregoing Divisions.

New bulbs are rarely ready before late September. Plant as early as possible for best results, although late planting is satisfactory. All varieties are hardy; in northern climates a mulch is assurance against freezing.

Plant bulbs so that tip is covered 3 to 4 inches. Use bonemeal or superphosphate, avoid all manures when planting, and top-dress the plantings in early March with commercial fertilizer. For long stems water the beds copiously whenever possible.

For naturalizing effects plant bulbs irregularly. Cast the bulbs and plant in the position that they have fallen.

## NARCISSUS NATURALIZED

## FRENCH'S SPECIAL LAWN GRASS MIXTURES

Good seed is essential. Our mixtures contain only the finest natural grasses, selected for PURITY and HIGH GERMINATION

### *Fertilizers Are Needed to Make Lawns Grow*

Fine lawn grasses require rich soil in which to do their best. When properly fed, they will grow so luxuriantly as to crowd out weeds. Grass that is constantly cut makes a heavy drain on the food content of soil, and unless this is annually renewed, a lawn will deteriorate.

### French's Special Lawn Grass Mixtures

**FRENCH'S "BEST" LAWN GRASS.** Great care has been used in formulating this fine mixture, composed of fine-leaved, deep-rooting viable turf grass seeds. It contains only Kentucky Bluegrass, Certified Colonial Bent, and Chewing's Fescue, producing a permanent and superior deep green velvety turf. Will withstand heat, drought, and hard winters. 25 lbs. \$45.00; 50 lbs. \$80.00; 100 lbs. \$150.00.

**FRENCH'S SUPER LAWN GRASS.** An excellent mixture for making a permanent lawn in fertile soil. It contains a high percentage of Colonial Bent and Kentucky Bluegrass in combination with other permanent grasses. 25 lbs. \$35.00; 50 lbs. \$65.00; 100 lbs. \$125.00.

**FRENCH'S SPECIAL EVERGREEN LAWN GRASS.** Thrives under a wide variety of soil and weather conditions and produces beautiful velvety lawns. A favorite of hundreds. 25 lbs. \$30.00; 50 lbs. \$55.00; 100 lbs. \$100.00.

**FRENCH'S SHADY LAWN GRASS.** A carefully prepared mixture to be grown in shady spots. This mixture consists of the highest grade of re-cleaned seeds and should make a good lawn in places where it is hard to grow grass because of shade. 25 lbs. \$32.50; 50 lbs. \$58.00; 100 lbs. \$110.00.

### Separate Varieties of Grasses and Clovers

**BLUE GRASS, KENTUCKY.** This is suited to a variety of soils and is largely used for lawns and as a pasture grass. It is unusually early and presents a beautiful green appearance in early spring when other grasses are still dormant. Sow 60 pounds to the acre. 10 lbs. \$12.00; 25 lbs. \$27.50; 50 lbs. \$52.50; 100 lbs. \$100.00.

A mass planting forms a lovely display—a mass of blue and white, intense and brilliant. They bloom at the time of the Crocuses, producing dwarf flower spikes that bear from 12 to 15 flowers of sky-blue with a pure white heart. They should be planted in the fall, 3 inches deep, about 18 bulbs to a square foot, in a sunny location or in half shade and in places where they can remain undisturbed for a number of years. All are 6 to 7 inches high, therefore excellent in the rockery as well.

**Luciliae.** Bright blue, white center. Often 6 to 8 blooms on each stem. 65c per doz.; \$4.00 per 100.
